## OLIVETTI PRIVACY LINE

Destroying documents is the only way to keep personal data and confidential information private. Just think of all the receipts with your name, address and telephone, or the documents where the numbers of your bank current account, credit card, ID card, passport or tax number appear. So what can you do to protect yourself or your business?

The easiest solution is to make documents illegible before you throw them away by shredding them. With the added advantage, as concern about environmental issues grows, that you minimise the bulk of paper sent for recycling.

The shredders in the Olivetti Privacy range can be used at home or in the office. Under the desk, near the printer or photocopier, they boost efficiency and ensure total privacy. The Olivetti Privacy line offers two different levels of security: level 2 on the Privacy 1008s strip-cut model, and level 3 on the Privacy 4005c, 4010c and 4015c cross-cut models. The Privacy 6000c, which also shreds floppy disks, CDROMs, DVDs, credit cards and swipe cards, provides level 3 security.
